SE Suite

Data and image management for the small enterprise

AGFA
HealthCare

SE Suite
is a seamless solution

A complete and self-contained software solution that enables the manipulation, management and centralization of medical imaging data. One that allows you to facilitate both your workflow and your first step on the path from analog to digital imaging. One whose modular design is tailored to the needs of environments such as private practices; small imaging centers; orthopaedic, chiropractic and veterinary practices; and imaging clinics. And one that is backed by the expertise and experience you find in all of Agfa HealthCare's products.

The SE Suite is a portfolio of data management software, created specifically to address the needs of smaller imaging environments.
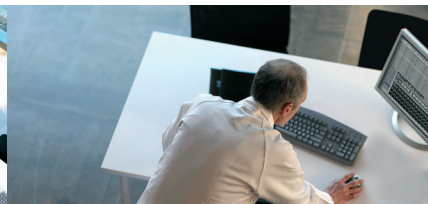

Complete. Competitive. Cost-effective.

A complete solution from the moment it is implemented, the SE Suite requires no additional upgrades. It can be used on your current equipment, enabling you to get the most from your existing investment and facilitate the transition to digital imaging in an easy and comprehensive way - all at a price you can afford.

In addition, as part of Agfa HealthCare's comprehensive imaging portfolio, the SE Suite helps maximize the benefits of the CR 30-X, our highly versatile system for private and decentralized Computed Radiography (CR) environments within smaller facilities.

The completeness of this solution, combined with its competitive pricing, makes the SE Suite a cost-effective image and data management solution that is accessible to all.

SE Suite

## is flexible and scalable to your needs

Improved workflow performance, digital availability of image data and image processing software tools: the benefits of a digital archiving and viewing solution are well-known. Yet, for many small- and medium-sized enterprises, cost has often outweighed the need for functionality and, as a result, many who could benefit from an image and data management solution aren't doing so.

With the SE Suite of image and data management software, all that has changed.

Now, regardless of the size of your organization, you can access a comprehensive archiving and distribution solution - with integral viewing functionality - for managing your image data. A solution with the flexibility, feature-rich functionality and scalability that enable you to improve diagnostic confidence, manage rapidly growing information volumes and increase efficiency and productivity.

The different configurations of SE Suite:

SE Server
Image Management DICOM Server
Incl. SE Web server

SE Standalone
Diagnosis / Review
Printing / CD burning

VPN Internet (optional)

CT

SE Client *(thick client)*
Diagnosis / Review in GenRad / Orthopaedics / Slice Imaging
Printing / CD burning

MRI

SE Web Client
Clinical Review

Internet

SE Web Client
Clinical Review

CR / DR

Internet

US

SE Media Viewer *(autorun)*
Dicom Viewer (incl. with CD's created by SE)

DICOM printers

Online Storage

Applied expertise and experience

Whichever selection you make from the SE Suite - SE Client Server or SE Standalone - you'll benefit from the proven experience and expertise that are the basis of all Agfa HealthCare solutions, including our extensive experience in radiology.

A comprehensive choice of functionality

As a complement to your existing digital acquisition system, the SE Suite provides the tools to store, manipulate, manage and digitally output acquired images - for both CR and other modalities. In addition, SE software runs on standard hardware (subject to minimum requirements), allowing you to choose your hardware together with your dealer. You can thus be sure that you reap the maximum benefit from your hardware investment.

So, whether you are looking for a mini archive system, a stand-alone server/workstation combination with web sharing option or simply access to a specific tool set, the SE Suite is the answer.

Optional licensing for several features:

- mammography on SE Standalone;
- Orthogon measurement tool;
- additional web clients;
- SE Worklist Client functionality.

Self-select your choice of SE component

SE Client Server - a multi-user, multi-modality DICOM archive software, designed to support online storage configurations. It includes web server functionality for remote viewing of stored images.

SE Standalone - a single-user solution that enables each location to manage its data in an independent setting.

Self-contai

- **Makes image and data management an affordable reality**
  Workflow performance improvements,
  digital availability of image data, on-screen diagnosis and
  availability of image processing software tools become an
  affordable reality.

- **Offers a complete solution**
  A complete solution from the moment it is implemented,
  with no need for subsequent expensive upgrades

- **Tailored to the needs of both single- and multi-user
  environments**
  Flexible and scalable. Ideal for private practices; small
  imaging centers; orthopaedic, chiropractic and veterinary
  practices; and imaging clinics.

  Comprises two versions, to support a broad range of
  applications: SE Client Server, and SE Standalone.

  Provides you with the choice of solution for your specific
  situation, with performance and storage capacity
  determined by your choice of hardware.

- **Cost-effective**
  Runs on standard hardware, enabling you to optimize your
  investment in your current hardware. (cf. minimum HW
  and SW requirements).

- **Backed by Agfa HealthCare's experience and expertise**
  Based on the same experience and expertise as
  Agfa HealthCare's top of the line products

- **Easy installation, low maintenance**
  Can be set up in as little as 30 minutes, with a new user or
  new modalities configured quickly and easily.

  Use of standard operating systems and databases makes
  servicing simple.

- **Easy to use**
  Intuitive Windows-like interface with straightforward layout
  configuration for easy navigation between studies, series and
  images, negates the need for time-consuming and costly training.

- **Supports fundamental needs**
  Multi-modality functionality archiving and viewing
  components with the versatility to support the most
  demanding needs and configurations.

  Multi-modality workstation has both 2D and 3D functions,
  and Print Layout Manager provides WYSIWYG printing.

  Supports DICOM grayscale printing and soft copy display.
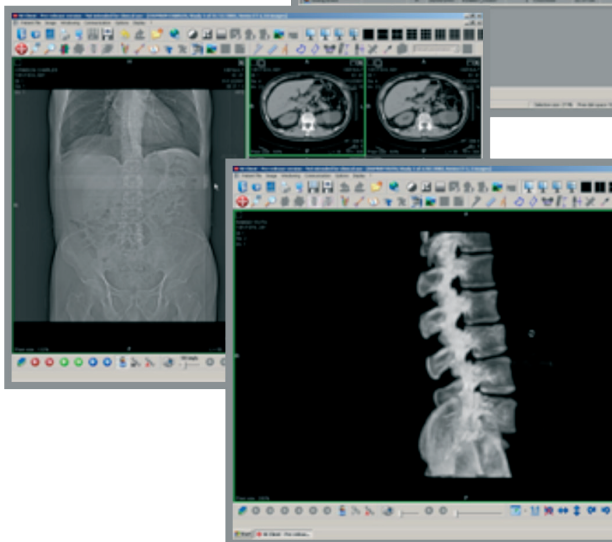

- **Provides seamless integration**
  Capable of seamlessly integrating with Agfa HealthCare's
  CR systems and hardcopy imagers.

  Imports images from other DICOM, IHE and PDI-compliant
  media.

ned

Smooth acquisition and archiving with the SE + NX Solution

By combining the SE Suite with Agfa HealthCare's NX workstation, you get the benefits of the NX workstation for acquisition and processing together with the advantages of SE for archiving. With this SE+NX Solution, smaller practices and veterinary clinics can use a single PC for both acquisition and archiving.

Why Agfa HealthCare?

Agfa HealthCare is a global leader in the fast growing market of integrated IT and imaging systems, offering healthcare facilities a seamless flow of information and a 360° view of patient care. The company has a unique, holistic approach, enabling it to provide in-depth clinical know-how and fully integrated hospital-wide solutions. These specialized solutions integrate IT and imaging systems for Radiology, Cardiology, Mammography and Orthopaedics. Agfa HealthCare's SE Suite of data management software specifically addresses the needs of smaller imaging operations and makes image data management affordable for all.
